The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4-7, 10 and 11 are rejected on the 35 USC 102 (b) has been anticipated by Nishiyama (264) or Qiu. Looking for example at figure 5, Nishiyama teaches electrical component comprising, a substrate #31, a first electrode layer #32 a piezoelectricly or #34, and a second electrode layer #36. It is noted that the electrode layers are actually made of an inner layer e.g. chrome or titanium which is then covered by an outer layer of e.g. gold. The inner layer thickness is between 200 and 500 Å and the outer layer is between 3000-5000 Å thick. Thus the inner electrode layer is thinner than the first electrode layer. Using the term 'growth layer' does not impart any specific structure to the layer and thus the prior art anticipates the claim structure. In a similar manner, Qiu teaches multiple electrode layers between a substrate #31 and a piezoelectric layer #41, the layers being thinner closer to the piezoelectric material and thicker closer to the substrate (see column 7, line 60-column 8, line 6).

Claims 2, 3, 8, 9 and 16-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Further cited of interest are Panasik, Nishiyama(066), Kashiwaya, Jacot, Yamada, Umeda and Sano.
